

## AK/SKS MAG. SPEED LOADER

Your new magazine speed loader is designed to load magazines the quick and easy way. This speed loader is designed to work with AK-47 and SKS detachable box magazines for the 7.62x39mm cartridge. You must use 10 round 7.62x39mm stripper clips (not included) in order to properly load magazines using this speed loader.

### How to Load

Begin by preloading your ammo onto your 10 round stripper clips. Check to make sure that your magazines are clean and free of any obstructions. Next, pull the charging handle out of the speed loader body. Attach the speed loader to the top of your magazine being sure that both are properly aligned. Push firmly downward on the loader until it is fully seated. Insert the stripper clipped ammo into the speed loader in the proper direction 10 rounds at a time. Align the charging handle rails with the grooves in the speed loader. Firmly push downward upon the charging handle until all rounds have entered the magazine. Be sure to apply enough pressure to ensure that the rounds do not jam. As you remove the charging handle from the speed loader the magnet on top will also remove the stripper clip automatically. Repeat the process as many times as necessary until you have a full magazine. Be cautious in only loading the proper cartridge size and the correct number of cartridges per magazine.

You can also use the speed loader charging handle to remove cartridges from your magazine. Hold the charging handle sideways by the neck. Place the narrow part of the handle against the rear of the cartridge. Put pressure on the rear of the cartridge so that the cartridge slides forward until it is free from the magazine. Repeat as necessary.
